

THE 15TH SOLAR PROJECT SINCE 2017

If you've been following our newsletters, you'd probably know solar is one of the major industries that we largely specialise in. How can we not when it is a sustainable green energy that our country is leveraging on. We are glad to say we have recently embarked on our 15th solar project in Malaysia.

For this project, we are handling a total of more than 600 containers in three different locations, passing through three different ports in Malaysia.

MORE THAN 200 CONTAINERS OF ESCALATORS FOR ELEVATED RAILWAY PROJECT

Years after the first phase of the massive railway project in Klang Valley, the second phase is expected to see completion sometime next year. Once again, we rendered our logistics services to our client that supplies the escalators to the train stations. Apart from arranging the freight, we also stored these parts in our warehouse prior to delivering to site.

At the site, we take charge of lifting these escalator parts and position them for installation. Stay tuned for more updates in the next newsletter!

STEEL STRUCTURES - CIDB TESTING & DOCUMENTATION

Steel is one of the controlled commodities in Malaysia so to import any form of steel structures, there may be certificate of approval (COA) required. Multi-Trans is well-verse with the application, overseeing the CIDB testing procedure and the intricacies of all documents involved.

PACKING & AIR FREIGHTING INDUSTRIAL TOOLS

High value and sensitive industrial tools require proper and sturdy packing before shipping, especially when it's a long-haul delivery. A suitable packing provides adequate protection and at the same time, makes it easier to move. One of our regular value added services is providing different types of packing - whether it's wooden crate, vacuum pack or carton boxes.

REGULAR & FREQUENT SHIPMENTS OF AVIATION CARGOES

As mentioned in our previous newsletter, aerospace is another industry that the Malaysian government is focusing with more investments in this field. Currently we have a sizable number of aviation clients and we are looking at securing more. Our experience will be a great advantage and do speak to us if you would like to find out more.

HIGH VOLUME POWER PLANT URGENT AIR FREIGHT SHIPMENTS

As the logistics partner for many of the large and small power plants in Malaysia, we handle plenty of power related cargoes such as inverters, turbines and generators. Accompanying the packages are accessories and spare parts, both new and for maintenance purposes.

PROJECTS BY OUR ASSOCIATE MEGALIFT

Cargo: Condensate Filtration Skid
Dimension: L11.00 m x W10.00 m x H7.00 m
