

SHIPMENTS OF AUTOMOTIVE STAMPING DIES FOR NEW CAR PRODUCTION

The shipments comprise of stamping dies and accessories imported to Malaysia from different parts of Japan. Every year we handle the importation and delivery of these dies to be supplied to the country's leading car maker for the production of their new vehicle models.

Multi-Trans is tasked to transfer the containers of goods to our warehouse for unstuffing and unpacking as well as temporary storage if required. Then we deliver them to the site in batches according to the schedule provided.

COMPLETED THE DELIVERIES FOR ANOTHER 100MW LSS3 SOLAR PROJECT IN MALAYSIA

Glad to share that this month we have completed yet another 100MW solar project in Malaysia. As mentioned in our earlier newsletter, we are handling four 100MW projects this year.

About 750 containers were delivered to the site in Perak from Penang Port. We are grateful for the trust in our strength and expertise in handling solar projects.

With almost 20 projects in our track record, we are confident and ready to work on the upcoming LSS4 solar projects.

HANDLING OF HIGHLY SENSITIVE MOLD ROTATOR

A mold rotator imported from Japan required special handling due to its high value and high levels of sensitivity. We arranged the transport, provided manpower and equipment to unpack the item at site before it's transferred to its final position in the factory.

IMPORT SHIPMENTS FOR A NEW PLANT BY THE LEADING GLOBAL PRODUCER OF INDUSTRIAL MINERALS

Multi-Trans has started handling the shipments from various countries for the set-up of a new industrial minerals plant. Prior to the start of the project, we went through series of meetings to advise the client on tariff code classification, import taxes and duties. We are also assisting the customer on tax exemption application as they are eligible to do so.

Now that the shipments have arrived, the goods are temporarily stored in our warehouse before we transport to the site in batches. From crates of varying sizes to cargoes of odd shapes and sizes, our team is capable of handling them safely and professionally.

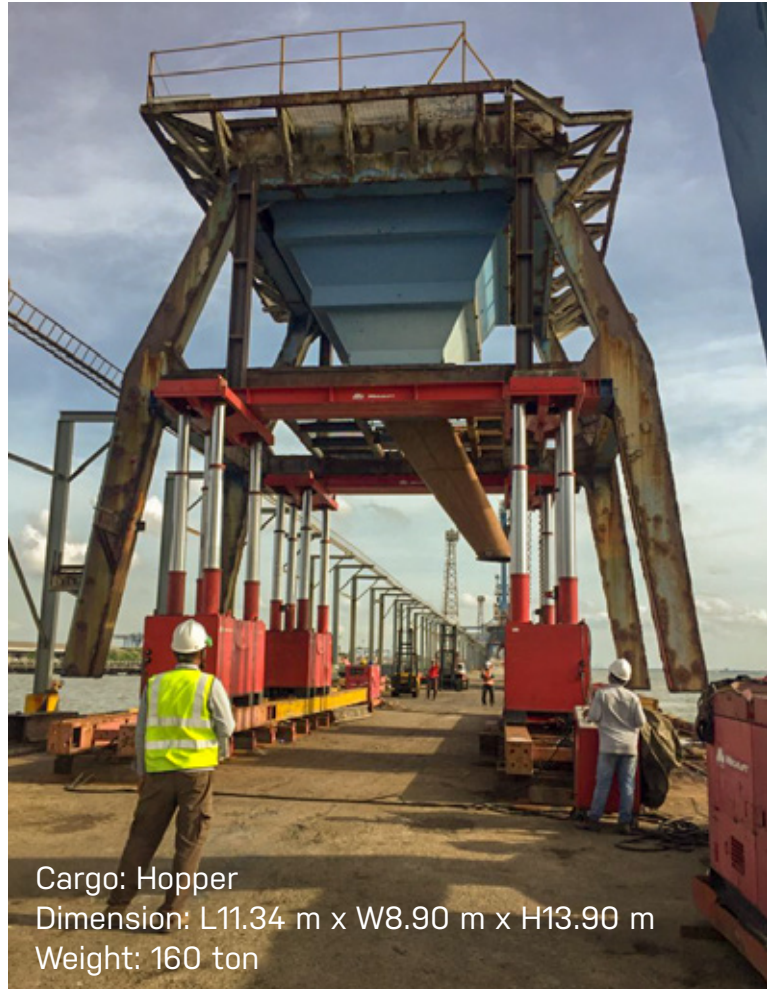

AIR FREIGHT

REGULAR IMPORT OF OXYGEN CONCENTRATORS DUE TO HIGHER DEMAND

RECTIFIER REPAIR & RETURN SHIPMENT BETWEEN KL AND PRAGUE FOR RAILWAY SPECIALIST

Cargo: Hopper
Dimension: L11.34 m x W8.90 m x H13.90 m
Weight: 160 ton

It's a dilapidated bulk cargo hopper in Port Klang that required dismantling. Old, rustic, probably left unused for years, coupled with the heavy weight, it required a fair bit of work to dismantle. Megalift was engaged to do what we do best - provide a safe and feasible solution given the circumstances. After surveying and studying the hopper, we decided to use our gantry to jack up the hopper so the structures could be cut and trimmed in stages. It took us about a week to complete the job, slowly and safely.

Transport of Storage Tanks for Glove Manufacturer

Since more than a year ago, we have been transporting storage tanks of varying sizes from Ijok and Rawang to Kuala Langat. These storage tanks are fabricated for a rubber gloves company that is currently undergoing massive expansion of their manufacturing plants.
