

ESCALATOR TRUSSES FOR KLANG VALLEY MRT 2

The import of escalator trusses continues as the construction of Klang Valley's Mass Rapid Transit Line 2 project goes on. The escalator parts are usually unstuffed from the containers in our warehouse and directly delivered to the sites. However, for some of the recent shipments, due to space constraints at the site, the initial installation was done in our open yard in Port Klang instead.

We provided the space, equipment and manpower to join the trusses in the presence of our client's engineering team. Once the trusses were connected, they were loaded on low loader trucks and delivered to the site for immediate positioning of the escalators. We also covered them with canvas as a form of protection during road transport.

IMPORT & INSTALLATION OF TRAILERS FOR WORLD'S LARGEST SEMI-TRAILERS MANUFACTURER

Upon unstuffing the trailers from containers, we provided space and manpower to carry out installation works. It's also where the inspection is held before the trailers are sent back to the client's site.

EXPORT OF OVERSIZED TANKS FROM PORT KLANG TO SABAH

This is one of the door-to-door shipments that we recently handled for a regular client specialising in engineering equipment. We first picked the tanks up from Seri Kembangan and sent them to our yard in Port Klang. Thanks to our experience in handling out-of-gauge cargoes, we ensured that the tanks are safely secured for the containers to be seaworthy.

AIR FREIGHT

EXPORT OF NITRILE GLOVES FROM PENANG TO HANEDA, JAPAN

For a new client in Penang trading medical items, we started off with an air freight shipment exporting almost 1 ton of nitrile gloves from Penang International Airport to Haneda Airport in Japan.

9 PALLETES OF FOLDABLE STACK STEEL RACKS RETURNED BY AIR TO KANSAI, JAPAN

Heavy and bare, these stackable steel racks are collected from the shipper's premise and delivered to our warehouse in KLIA. Weighing 8 tons in total, we sorted them onto pallets and shrink wrapped them before transferring to the terminal for the flight to Kansai, Japan.

INJECTION MOULD FOR INTERNATIONAL PLASTICS MANUFACTURER

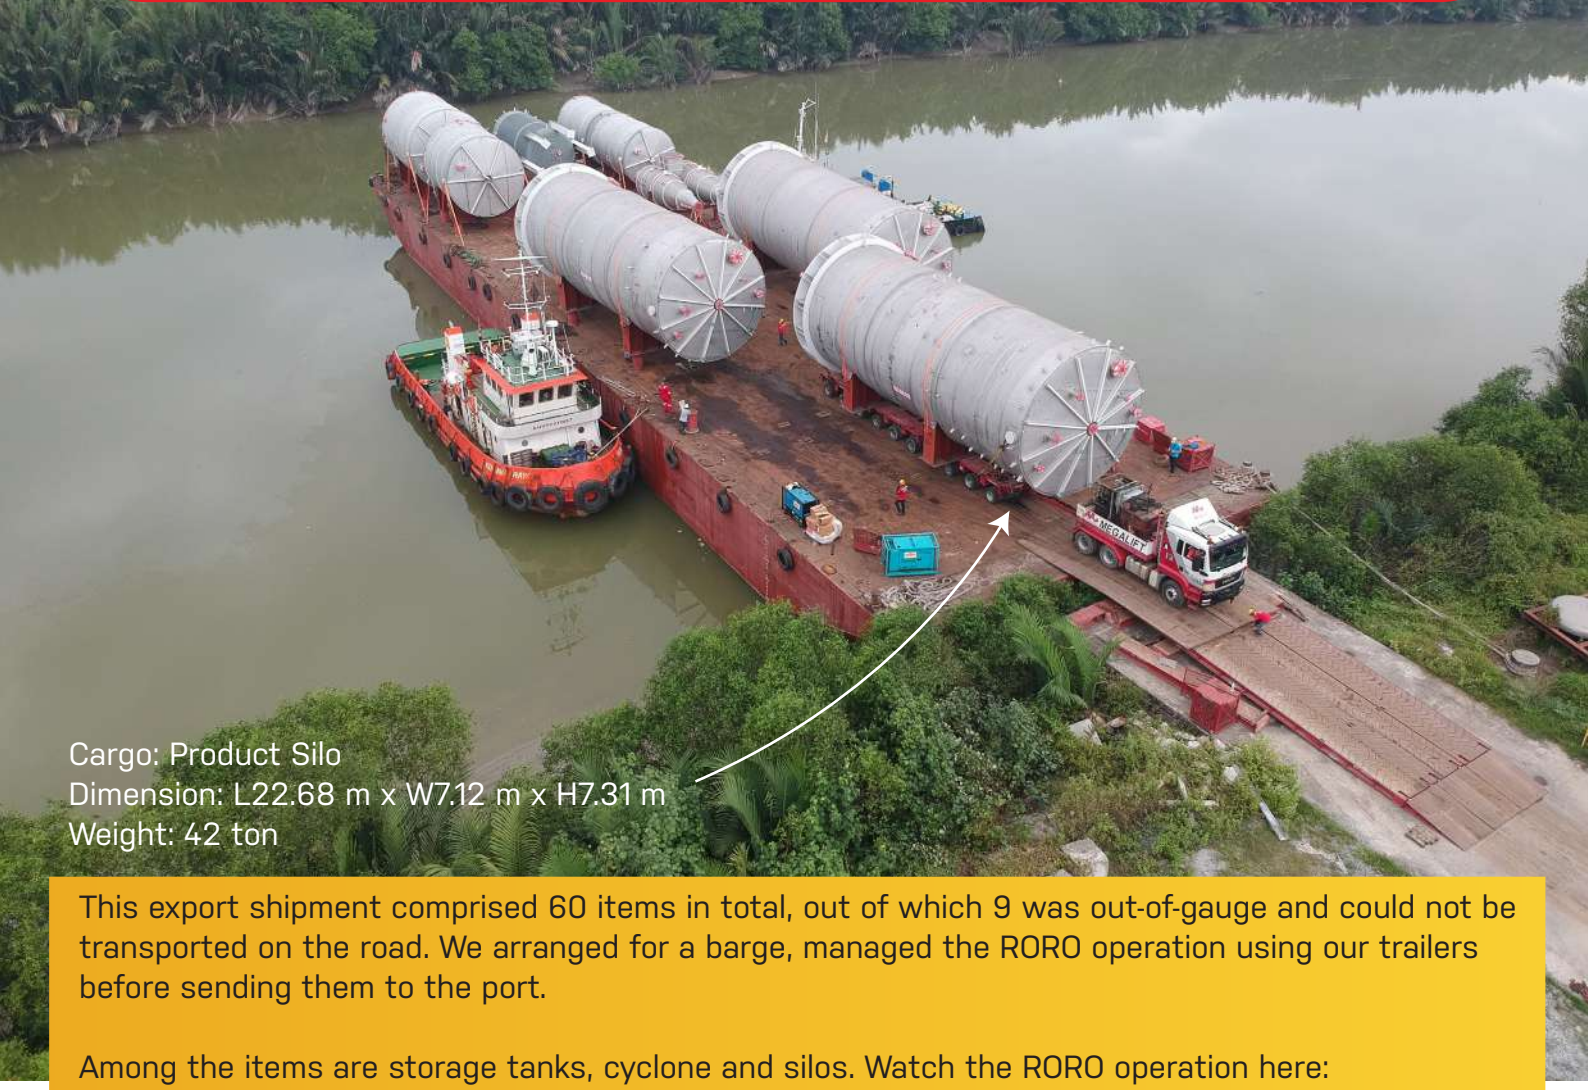

Injection moulds are probably the most important machines in the production of plastic or themoplastic products because it gives form to the molten material. This shipment carries a 7.4 ton new machine imported from China to be sent to the client's plant in Melaka.

MORE THAN 20 ITEMS OF OILWELL EQUIPMENT PACKED INTO 10 WOODEN CRATES AND EXPORTED VIA AIR

7.5 TON OF HIGH QUALITY STEEL OILS FOR STEEL MANUFACTURER

Cargo: Product Silo
 Dimension: L22.68 m x W7.12 m x H7.31 m
 Weight: 42 ton

This export shipment comprised 60 items in total, out of which 9 was out-of-gauge and could not be transported on the road. We arranged for a barge, managed the RORO operation using our trailers before sending them to the port.

Among the items are storage tanks, cyclone and silos. Watch the RORO operation here:

Transport of Tunnel Boring Machine (TBM)

Another round of TBM shifting within Klang Valley by Megalift and this time, we completed 5 sets. There were series of transportations carrying different parts of the TBM including the heaviest front shield, middle shield, tailskin and all of its accessories.

Cargo: Front Shield
 Dimension: L6.8 m x W6.8 m x H4.6 m
 Weight: 170 ton each
